One-leaf aspect sliding gate

## GWIR

## EBEN

Cantilever gate that requires no bottom track to open and close. The gate is never in contact with the ground so it is not only easy to install but also easy to use. The gate is supported by a set of adjustable castors.

- **AESTHETIC:** no groundwork required for the installation of the track so the original shape of the ground is preserved.
- **ADAPTABLE:** adapts to all situations: slope, presence of a water-drain ...
- **HARDWEARING:** will never be blocked by the snow
